## An Engineer with

- Expert-level understanding of the fundamentals of Javascript, TypeScript and Web Technologies
- Thorough knowledge and expertise on Frontend best practices and Design patterns
- Strong passion towards Usability, User experience, Human-centered designs
- Demonstrated team player, mentor, and active Javascript community contributor
- Strong sense of Ownership and Professional Pride

## Experiences:

- **Stakeholder Management:** I've experience working with all the stakeholders in Product Development (Product Managers/Clients, Design Teams, Frontend/Backend Teams etc), across geographies.
- **Mentorship:** I've trained and mentored 60+ Frontend engineers and helped them succeed in their roles with best performances.
- **Design:** I worked closely and actively participated in all aspects of a Product Design right from the Specifications, to Interaction Designs, Persona Definitions, Rapid-Prototyping, User Analysis, Information Architecture etc. I was awarded the first prize in "Boycott Bad-design" Contest, at a company-wide design contest at Microsoft.
- **Architecture:** I did work as UI-Architect, responsible for everything on Frontend side, for multiple products at a company level. My experience includes providing technical solutions to new feature requests, addressing legacy issues and tech-debt, at the same time improving the User Experience with better interaction designs, all at the same time.
- **Technical:** I've worked on all major Javascript Libraries and most of the Modern JS Frameworks like Angular, React, Vue etc. I'm Framework agnostic and open, flexible and unbiased while choosing the best-fitting technologies, based on the individual project requirements.
- **Experience:** I've experience working in cross-functional agile teams, in the Individual Investor Team, where I initiated technology transition of Morningstar Australia's web applications.

## Experience includes

- Working for MNCs / Product Companies ([Microsoft](#), [Specialized](#), [Morningstar](#) etc)
- Working in Startups ([Divami](#), [eureQa](#), [Ahoy Club](#), [Today's Plan](#) etc), often closely with Co-founders
- Working in Multidisciplinary and Cross-functional teams, with Clients, Product Managers, Designers, Backend Developers, all from different geographies
- Mobile Application Development on all major Platforms including PalmOS, PocketPCs, Embedded Linux phones, Android, iOS, Windows Mobile, OnsenUI, React Native, Hybrids etc

**Currently,** I'm working as *Sr. Frontend Engineer* for [Objective Corporation](#), helping Optimise and Advance the secure file-sharing application ([Connect](#)), that is serving Defence and a lot of other Government clients. I own and deliver some of the key features of Connect, and also take care of improving Non-functional requirements of the application.

**Previously,** I helped [Specialized Bicycles](#), (and [Today's Plan](#) before Specialized acquired it) in developing and delivering the most customizable, analytical and interactive training platforms and apps for professional cyclists. I was one of the early engineers who owned some of the coolest features (Calendar, Route Editor, Dashboards, Ride Analysis etc) and functionality ([Hybrid Application](#)) that helped Specialized save a lot of time, resources and maintenance costs across their Mobile and Web applications.
